Journal of the Medical Association of Thailand = Chotmaihet Thangphaet 1989 ; 72 (2) : 71-73

Abstract : Forty-two per cent of 24 patients with Taeniasis saginata were cured by two-gram dose of a crude aqueous extract of the wood Artocarpus lakoocha, Puag-Haad, while eighty per cent of 25 patients were cured by three-gram dose which is comparable to the results of five-gram dose but had less side-effect. Thus, the three-gram dose of Puag-Haad is recommended in the treatment of taeniasis. [Journal Article; In English; Thailand]
